Before You Begin...

Thank you for purchasing the EVGA Z68/P67 Motherboard. This board is based off of the new Intel Z68/P67 chipset with native support for SATA III/6G for the performance you demand, delivered when you need it.

As always this board comes with the added bonus of EVGA's industry leading technical support in case you ever have any issues or questions.

Parts NOT in the Kit

This kit contains all the hardware necessary to install and connect your new EVGA Z68/P67 Motherboard. However, it does not contain the following items that must be purchased separately to make the motherboard functional.

- ❑ **Intel Socket 1155 Processor**
- ❑ **DDR3 System Memory**
- ❑ **Socket 775 or 1155/1156 CPU cooler for the processor**
- ❑ **PCI Express Graphics Card**
- ❑ **Power Supply**

EVGA assumes you have purchased all the necessary parts needed to allow for proper system functionality. For a full list of supported CPU's on this motherboard, please visit <http://www.evga.com/support/motherboard/>.

Intentions of the Kit

This kit provides you with the motherboard and all connecting cables necessary to install the motherboard into a PC case. If you are *building* a PC, you will use most of the cables provided in the kit. If however, you are *replacing* a motherboard, you will not need many of the cables.

When *replacing* a motherboard in a PC case, you will need to reinstall an operating system even though the current Hard Disk Drive may already have one installed.

EVGA Z68/P67

Motherboard

Motherboard Specifications

- ❑ Size
 - EATX form factor of 12 inches x 10.3 inches
- ❑ Microprocessor support
 - Intel Socket 1155 Processor
- ❑ Operating systems:
 - Supports Windows XP/Vista/7 32 and 64 bit
- ❑ Contains Intel Z68/P67 chipset
- ❑ System Memory support
 - Supports Dual channel DDR3-2133+. Officially supports up to 16GBs of DDR3 memory.
- ❑ USB 2.0 Ports
 - Supports hot plug
 - Supports wake-up from S1 and S3 mode
 - Supports USB 2.0 protocol up to a 480 Mbps transmission rate
- ❑ USB 3.0 Ports
 - Backwards compatible USB 2.0 and USB 1.1 support
 - Supports transfer speeds up to 5Gbps

- ❑ SATA ports up to 3.0 Gb/s (300 M/s) data transfer rate
 - SATA ports up to 6.0 Gb/s (600 M/s) data transfer rate
 - Support for RAID 0, RAID 1, RAID 0+1, RAID5 and RAID 10
 - ESATA (optional)
- ❑ Onboard LAN
 - Supports 10/100/1000 Mbit/sec Ethernet
- ❑ Onboard IEEE 1394a (Firewire)
 - Supports hot plug
- ❑ Onboard Audio
 - Realtek High-Definition audio
 - Supports 8-channel audio
 - Supports Jack-Sensing function
- ❑ PCI-E Support
 - PCI-E 2.0 Slots
 - Low power consumption and power management features
- ❑ Green Function
 - Supports ACPI (Advanced Configuration and Power Interface)
 - Supports S0 (normal), S1 (power on suspend), S3 (suspend to RAM), S4 (Suspend to disk - depends on OS), and S5 (soft - off)
- ❑ Expansion Slots
 - PCI-E x1 slots
 - PCI-E x8/x16 slots

Unpacking and Parts Descriptions

Unpacking

The EVGA Z68/P67 Motherboard comes with all the necessary cables for adding a motherboard to a system case. If replacing a motherboard, you may not need many of these cables.

Equipment

The following accessories are included with the EVGA Z68/P67 Motherboard:

The EVGA Z68/P67 Motherboard

This PCI-E motherboard contains the Intel Z68/P67 chipset and is SLI-ready.

1 - Visual Guide

Helps to quickly and visually guide you through the hardware installation of the motherboard.

1 - I/O Shield

Installs in the system case to block radio frequency transmissions, protect internal components from dust, foreign objects, and aids in proper airflow within the chassis.

1 – I/O Shield Fan (Optional)

Exhausts Air from the IO Shield out of the rear of the case.
Attaches to IO Shield.

2 - 2-Port SATA Power Cables

Allows a Molex power connector to adapt to a SATA power connector.

1 - 2-Port USB 2.0 / 1394a Firewire Bracket

Provides two additional USB ports and 1 additional 1394a Firewire port to the back panels of the chassis.

1 – 2-Port USB 3.0 Bracket (FTW Model Only)

Allows Addition of 2 USB 3.0 ports by Connecting to the motherboard header.

2 – SATA II/3G Data Cables

Used to support the SATA protocol and each one connects a single drive to the motherboard.

2 – SATA III/6G Data Cables

Used to support the SATAIII/6G high speed protocol and each one connects a single drive to the motherboard.

1 - 3-way SLI Bridge (FTW Model Only)

Bridges three (3) graphics cards together which allows for 3-way SLI.

1 - 2-way SLI Bridge

Bridges two (2) graphics cards together which allows for 2-way SLI.

1 – EVGauge (Optional)

Analog Gauge that represents your CPU frequency in real time.

1 – ECP Panel (Optional)

Allows monitoring of post codes and remote control of PCIe slot disable, voltages and CMOS reset all on one bay mounted panel.

1 - Installation CD

Contains drivers and soare needed to setup the motherboard.

1 – User Manual

Contains Information needed to properly install and configure your EVGA Motherboard.

Hardware Installation

This section will guide you through the installation of the motherboard. The topics covered in this section are:

- Preparing the motherboard
- Installing the CPU
- Installing the CPU fan
- Installing the memory
- Installing the motherboard
- Connecting cables

Safety Instructions

To reduce the risk of fire, electric shock, and injury, always follow basic safety precautions.

Remember to remove power from your computer by disconnecting the AC main source before removing or installing any equipment from/to the computer chassis.

Preparing the Motherboard

Installing the CPU

Be very careful when handling the CPU. Hold the processor only by the edges and do not touch the bottom of the processor.

Use the following procedure to install the CPU onto the motherboard:

Unhook the socket lever by pushing *down* and *away* from the socket.

Pull the socket lever back and the load plate will automatically lift. There is a protective socket cover within the CPU socket to protect the socket when there is no CPU installed.

Remove the protective socket cover from the CPU Socket.

Note: After removing the CPU socket cover, it is recommended that you keep it in case you need to remove the CPU so for any reason you can replace the cover to avoid damaging the CPU socket pins.

Align the notches in the processor with the notches on the socket.

Lower the processor straight down into the socket with out tilting or sliding it into the socket.

Note: Make sure the CPU is fully seated and level in the socket.

Close the load plate over the CPU and press down while you close and engage the socket lever.

The CPU installation is complete.

Align notches with notches on the CPU

Installing the CPU Fan

There are many different fan types that can be used with this motherboard. Follow the instruction that came with your fan assembly. Be sure that the fan orientation is correct for your chassis type and your fan assembly.

Please note that there are 2 sets of mounting holes, there are holes to be used for Socket 1156 and 1155 heatsinks and are labeled. The other holes are to be used for Socket 775 heatsinks.

In most cases, the Socket 1156/1155 mounting holes will be used.

Installing System Memory (DIMMs)

Your new motherboard has four 240-pin slots for DDR3 memory. These slots support 1GB, 2GB and 4GB DDR3 DIMMs. There must be at least one memory slot populated to ensure normal operation. Use the following the recommendations for installing memory. (See Figure 1 on page for the location of the memory slots.)

- ❑ **One DIMM:** If using 1 DIMM (**Single Channel**), install into: **DIMM slot 1.**
- ❑ **Two or Four DIMMs:** If using 2 DIMMs (**Dual Channel**), install into: **DIMM slots 1 and 3.** If using 4 DIMMs (**Dual Channel**), install into: **DIMM slots 1, 2, 3, and 4.**

Use the following procedure to install DIMMs. Note that there is only one gap near the center of the DIMM slot. This slot matches the slot on the DIMM to ensure the component is installed properly.

1. Unlock a DIMM slot by pressing the module clips outward.

Align the memory module to the DIMM slot, and insert the module vertically into the DIMM slot. The plastic clips at both sides of the DIMM slot automatically lock the DIMM into the connector.

Installing the Motherboard

The sequence of installing the motherboard into a system case depends on the chassis you are using and if you are replacing an existing motherboard or working with an empty system case. Determine if it would be easier to make all the connections prior to this step or to secure the motherboard and then make all the connections. It is normally easier to secure the motherboard first.

Use the following procedure to install the I/O shield and secure the motherboard into the chassis.

Note: Be sure that the CPU fan assembly has enough clearance for the system case covers to lock into place and for the expansion cards. Also make sure the CPU Fan assembly is aligned with the vents on the covers. This will depend on the system case being used.

Installing the I/O Shield

The motherboard kit comes with an I/O shield that is used to block radio frequency transmissions, protects internal components from dust and foreign objects, and promotes correct airflow within the chassis.

Before installing the motherboard, install the I/O shield from the *inside* of the chassis. Press the I/O shield into place and make sure it fits securely. If the I/O shield does not fit into the chassis, you would need to obtain the proper size from the chassis supplier.

Also Note that for ease of installation you may want to install I/O shield Fan (optional) before installing into case.

Securing the Motherboard into a System Case

Most system cases have a base with mounting studs or spacers to allow the motherboard to be secured to the chassis and help to prevent short circuits. If there are studs that do not align with a mounting hole on the motherboard, it is recommended that you remove that stud to prevent the possibility of a short circuit. In most cases, it is recommended to secure the motherboard using a minimum of nine (9) spacers and screws.

1. Carefully place the motherboard onto the stand offs located inside the chassis.
2. Align the mounting holes with the stand offs.
3. Align the connectors to the I/O shield.
4. Ensure that the fan assembly is aligned with the chassis vents according to the fan assembly instruction.
5. Secure the motherboard with a recommended minimum of nine (9) screws.

Connecting Cables

This section takes you through all the necessary connections on the motherboard. This will include:

- Power Connections
 - 24-pin ATX power (**PW1**)
 - 8-pin ATX 12V power (**PW12-1 & PW12-2**)
- Internal Headers
 - Front Panel Header
 - IEEE 1394a Header
 - USB Headers
 - Audio Header
- SATA II
- SATA III
- Chassis Fans
- USB 2.0

- ❑ Expansion slots
- ❑ CMOS Clear Button

24-pin ATX Power (PW1)

PW1 is the main power supply connector located along the edge of the board next to the DIMM slots. Make sure that the power supply cable and pins are properly aligned with the connector on the motherboard. Firmly plug the power supply cable into the connector and make sure it is secure.

Figure 1. PW1 Motherboard Connector

Table 1. PW1 Pin Assignments

| Connector | Pin | Signal | Pin | Signal |
|-----------|-----|---------|-----|--------|
| | 1 | +3.3V | 13 | +3.3V |
| | 2 | +3.3V | 14 | -12V |
| | 3 | GND | 15 | GND |
| | 4 | +5V | 16 | PS_ON |
| | 5 | GND | 17 | GND |
| | 6 | +5V | 18 | GND |
| | 7 | GND | 19 | GND |
| | 8 | PWROK | 20 | RSVD |
| | 9 | +5V_AUX | 21 | +5V |
| | 10 | +12V | 22 | +5V |
| | 11 | +12V | 23 | +5V |
| | 12 | +3.3V | 24 | GND |

8-pin ATX 12V Power (PW12-1 & PW12-2)

PW12-1 & PW12-2, the 8-pin ATX 12V power connection, is used to provide power to the CPU. Align the pins to the connector and press firmly until seated.

BIOS Select Switch

The BIOS Select Switch is located directly to the right of the PC speaker on the lower edge of the mainboard. This jumper controls which of physical BIOS chips are to be used when the system is powered on.

The addition of 3 physical BIOS chips on the mainboard allows for usage of three completely different bios versions or saving of profiles to differentiate between bench sessions and regular 24/7 usage.

Connecting Internal Headers

Front Panel Header

The front panel header on this motherboard is one connector used to connect the following four cables.

(see Table 2 for pin definitions):

❑ **PWRLED**

Attach the front panel power LED cable to these two pins of the connector. The Power LED indicates the system's status. When the system is powered on, the LED will be on. When the system is turned off, the LED is off. When the system is in S1, S3, S4 status, the LED will blink.

Note: Some system cases do not have all four cables. Be sure to match the name on the connectors to the corresponding pins.

❑ **PWRSW**

Attach the power button cable from the case to these two pins. Pressing the power button on the front panel turns the system on and off rather than using the onboard button.

❑ **HD_LED**

Attach the hard disk drive indicator LED cable to these two pins. The HDD indicator LED indicates the activity status of the hard disks.

❑ **RESET**

Attach the Reset switch cable from the front panel of the case to these two pins. The system restarts when the **RESET** switch is pressed.

Table 2. Front Panel Header Pins

| | Pin | Signal |
|-------------------|-----|-----------|
| HD_LED | 1 | HD_PWR |
| | 3 | HD Active |
| PWRLED | 2 | PWR LED |
| | 4 | STBY LED |
| RESET | 5 | Ground |
| | 7 | RST BTN |
| PWRSW | 6 | PWR BTN |
| | 8 | Ground |
| No Connect | 9 | +5V |
| Empty | 10 | Empty |

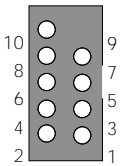

IEEE 1394a (Firewire)

The IEEE 1394a expansion cable bracket is provided in the box but if you do not require the additional external connections, you do not need to install it.

1. Secure the bracket to either the front or rear panel of the system case (not all system cases are equipped with the front panel option).

Connect the end of the cable(s) to the IEEE 1394a headers on the motherboard.

Table 3. IEEE 1394a Connector Pins

| Connector | Pin | Signal |
|---|-----|--------|
| IEEE 1394a Connector  | 1 | TPA+ |
| | 2 | TPA- |
| | 3 | GND |
| | 4 | GND |
| | 5 | TPB+ |
| | 6 | TPB- |
| | 7 | +12V |
| | 8 | +12V |
| | 9 | Empty |
| | 10 | GND |

USB Headers

This motherboard contains six (6) USB 2.0 ports that are exposed on the rear panel of the chassis (Figure 2). The motherboard also contains two 10-pin internal header connectors onboard that can be used to connect an optional external bracket containing up to four (4) USB 2.0 ports.

1. Secure the bracket to either the front or rear panel of your chassis (not all chassis are equipped with the front panel option).
2. Connect the two ends of the cables to the USB 2.0 headers on the motherboard.

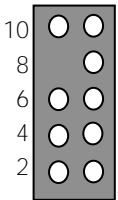

Table 4. USB 2.0 Header Pins

| Connector | Pin | Signal |
|----------------------------------|------------|---------|
| USB 2.0 Header Connector | 1 | 5V_DUAL |
| | 3 | D- |
| | 5 | D+ |
| | 7 | GND |
| | 9 | Empty |
| | Pin | Signal |
| | 2 | 5V_DUAL |
| | 4 | D- |
| | 6 | D+ |
| | 8 | GND |
| 10 | No Connect | |

Audio

The audio connector supports HD audio standard and provides two kinds of audio output choices: the Front Audio and the Rear Audio. The Front Audio supports re-tasking function.

Table 5. Front Audio Connector

| Connector | Pin | Signal |
|--|-----|---------------|
| Front Audio Connector  | 1 | PORT1_L |
| | 2 | AUD_GND |
| | 3 | PORT1_R |
| | 4 | PRECENCE_J |
| | 5 | PORT2_R |
| | 6 | SENSE1_RETURN |
| | 7 | SENSE_SEND |
| | 8 | Empty |
| | 9 | PORT2_L |
| | 10 | SENSE2_RETURN |

Card Edge

PCI-E x1 Slots

There are PCI-E x1 slots that are designed to accommodate less bandwidth-intensive cards, such as a modem, sound or LAN card.

PCI-E x16/x8 Slots

These PCI-E slots are reserved for Graphics Cards and PCI-E x1, x4, x8 and x16 devices. The design of this motherboard supports multiple Graphics Card technologies such as SLI or CrossFireX.

When installing a PCI-E Graphics Card, be sure the retention clip snaps and locks the card into place. If the card is not seated properly, it could cause a short across the pins. Secure the card's metal bracket to the chassis back panel with the screw used to hold the blank cover.

Onboard Buttons

These onboard buttons include RESET, POWER and Clear CMOS. These functions allow you to easily reset the system, turn on/off the system, or clear the CMOS.

Clear CMOS Button

The motherboard uses the CMOS RAM to store all the set parameters. The CMOS can be cleared by pressing the Clear CMOS button either onboard or on the external I/O Panel.

External Clear CMOS Button

RESET and POWER Button

These onboard buttons allow you to easily turn on/off the system. These buttons allow for easy debugging and testing of the system during troubleshooting situations.

The POWER button with an integrated LED indicates the system's status. When the system is powered on, the LED remains a solid red.

The RESET button with an integrated LED indicates the activity status of the hard disk drives and will flicker accordingly.

RESET
Button

POWER
Button

Clear CMOS
Button

Post Port Debug LED and LED Status Indicators

Post Port Debug LED

Provides two-digit POST codes to show why the system may be failing to boot. It is useful during troubleshooting situations. This Debug LED will also display current CPU socket temperatures after the system has fully booted into the Operating System.

Debug LED with CPU Temperature Monitor

LED Status Indicators

These LEDs indicate the system's status.

- POWER LED (Green):**
When the System is powered on: This LED is on.
- DIMM LED (Yellow):**
When the Memory slot is functional: This LED is on.
- STANDBY LED (Blue):**
When the System is in Standby Mode: This LED is on. This LED will remain on as long as the motherboard is receiving constant power.

POWER LED (GREEN)

STANDBY LED (BLUE)

DIMM LED (YELLOW)

Installing Drivers and Soare

Note: It is important to remember that *before* installing the driver CD that is shipped in the kit, you need to load your operating system. The motherboard supports Windows XP , Vista and Windows 7 both 32 and 64 Bit.

The kit comes with a CD that contains utilities, drivers, and additional soare.

The CD that has been shipped with the EVGA Z68/P67 Motherboard contains the following software and drivers:

- Chipset Drivers
- Audio Drivers
- RAID Drivers
- LAN Drivers
- Matrix Storage
- USB 3.0 Drivers
- EVGA E-LEET
- User's Manual

Windows XP/Vista/Win 7 Driver Installation

1. Insert the EVGA Z68/P67 installation CD for the motherboard included in the kit.
2. The CD will autorun, install the drivers and utilities listed on the install screen. If the CD does not run, go to My Computer and click on the CD to open.

Appendix A. POST Codes

This section provides the AMI POST Codes (Table 6) for the EVGA Z68/P67 Motherboard during system boot up.

The POST Codes are displayed on the Debug LED readout located directly onboard the motherboard.

This Debug LED will also display current CPU temperatures after the system has fully booted into the Operating System.

Debug LED with CPU Temperature Monitor

Table 6. AMI POST Code

EVGA Glossary of Terms

1337 – This is reserved for EVGA level elite

AC – Alternating Current

ACPI - Advanced Configuration and Power Interface

AFR – Alternate Frame Rendering

APIC - Advanced Programmable Interrupt Controller

ACPI – Advanced Configuration and Power Interface

BCLK – Base Clock (or operating frequency of base system bus)

BIOS - Basic Input Output System

CD-ROM - Compact Disc Read-Only Memory

CMOS - Complementary Metal-Oxide Semiconductor

CPU – Central Processing Unit

D-ICE – Dry Ice Cooling

DDR2 - Double Data Rate 2

DDR3 - Double Data Rate 3

DIMM - Dual In-line Memory Module

DMI – Direct Memory Interface

DRAM - Dynamic random access memory

DVD - Digital Versatile Disc

DVI – Digital Video Interface

FDC - Floppy Disk Controller

EVGA Z68/P67 Motherboard

FSB – Front Side Bus

– For The Win!

GHz – Gigahertz

GPU – Graphics Processing Unit

HDD - Hard Disk Drive

HDMI - High-Definition Multimedia Interface

HDR – High Dynamic Range Lighting

HPET - High Precision Event Timer

HT – Hyper-Threading

HSF - Heat Sink Fan

I/O - Input/Output

IDE - Integrated Drive Electronics

IEEE - Institute of Electrical and Electronics Engineers

IGP - Integrated Graphics Processors

IMC – Integrated memory controller

IRQ - Interrupt Request

JBOD - Just a Bunch of Disks

JEDEC - Joint Electron Device Engineering Council

LAN - Local Area Network

LCD - Liquid Crystal Display

LGA – Land Grid Array

LN2 – Liquid Nitrogen Cooling

MAC - Media Access Control

MCP - Media and Communications Processor

MHz – Megahertz

MMIO – Memory Mapped I/O

NB - Northbridge

NCQ - Native Command Queuing

NIC - Network Interface Card

NTFS - New Technology File System

OEM - Original Equipment Manufacturer
PATA - Parallel Advanced Technology Attachment
PCB - Printed Circuit Board
PCI - Peripheral Component Interconnect
PCIe - Peripheral Component Interconnect Express
PCI-x - Peripheral Component Interconnect Extended
POST – Power on Self Test
PWM – Pulse Width Modulation
QDR - Quad Data Rate
QPI – Quick Path Interconnect
RAID - Redundant Array of Inexpensive Disks
RGB - Red Green Blue
SATA - Serial Advanced Technology Attachment
SB - Southbridge
SCSI - Small Computer System Interface
SFR – Split Frame Rendering
SLI - Scalable Link Interface
SPD - Serial Presence Detect
SPDIF - Sony/Philips Digital Interconnect Format
SPP - System Platform Processors
SSD – Solid State Drive
TCP/IP - Transmission Control Protocol/Internet Protocol
USB - Universal Serial Bus
VDroop - V-core Voltage Drop
VGA - Video Graphics Array

Compliance Information

FCC Compliance Information

This device complies with FCC Rules Part 15. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer's instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures: (1) Increase the separation between the equipment and signal source, or (2) connect the equipment to an outlet on a circuit different from that to which the signal source is connected. Consult the dealer or an experienced computer technician for help. The use of shielded cables for connection of peripheral devices to the PC systems is required to ensure compliance with FCC regulations. Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

CE Compliance Information

Generic Radiation Interference Standard for Information Technology Equipment. (EN 55022: 2006, Class B), (EN 61000-3-2: 2006), (EN 61000-3-3: 1995 + A1: 2001 + A2: 2005). Warning: This is a Class B product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measure. Generic Immunity Standard for Information Technology Equipment. (EN 55024: 1998 + A1: 2001 + A2: 2003).

Trademark & Copyright Information

2001-2011 EVGA Corp. EVGA, the EVGA logo and combinations thereof are trademarks of EVGA Corp. All brand names, company names, service marks, logos, and trademarks of the company, or its affiliates or licensors are trademarks or registered trademarks of the company or its subsidiaries, affiliates or licensors in the US and other countries.
